

POSITIONERS
CATALOGUE 2021

POZI-FOAM POSITIONING PRODUCTS

Proper placement of the patient on the operating table is critical to ensure the best possible care and protection against injuries, such as decubitus ulcers and nerve damage. Properly selected positioners enable correct positioning of the patient and pressure distribution. The positioning products offer a reliable, efficient and economical solution for the safe placement of patients during surgery. POZI-FOAM enable supporting anti-bedsore prophylaxis in places particularly susceptible to pressure ulcers or relieving and stabilizing places where they have already been created.

The products are intended for one patient use only, which minimizes the risk of cross-contamination.

Advantages of POZI-FOAM positioners:

- Decreases the risk of pressure sores
- Maximizes comfort using cushioning on pressure points
- Reduces chance of injury during movement
- Facilitates patient positioning
- Minimizes the risk of cross-infection

POZI-FOAM

Head pad

Designed for people with the risk of developing pressure sores on the head or for the stabilization.

- Comfortably stabilizes the head in various positions
- Prevents from occipital abrasions

REF	SIZE
2801	11 cm x 13 cm x 6 cm
